1 MASTER SOP — FULL BODY DETAIL (INTERIOR + EXTERIOR)

1.1 PURPOSE

This SOP ensures a complete, high-quality vehicle transformation by standardizing both interior and exterior detailing processes. The goal is to maintain consistency, reduce errors, and deliver a professional finish across all vehicle types.

1.2 ROLES & RESPONSIBILITY

Role	Responsibility
1 Technician	Executes full workflow sequentially
2 Technicians	Exterior handled by Tech 1, Interior handled by Tech 2, working simultaneously to improve efficiency

1.3 TIME STANDARDS

Vehicle Type	1 Tech	2 Techs
Hatchback	3.0 – 4.0 hrs	2.0 – 2.75 hrs
Sedan	3.5 – 5.0 hrs	2.5 – 3.5 hrs
SUV	4.5 – 6.5 hrs	3.0 – 4.5 hrs
Pickup Truck	4.0 – 6.0 hrs	3.0 – 4.0 hrs
Minivan	5.0 – 7.0 hrs	3.5 – 5.0 hrs
Bus / Large Van	6.0 – 10 hrs	4.5 – 7.0 hrs

1.3.1 Condition Adjustment

Condition	Time Adjustment
Light	-20%
Standard	Base time
Heavy	+30–50%
Extreme	Quote separately

2 PROCESS FLOW

2.1 PHASE 1: PREP & SETUP (10–15 min)

The vehicle must be prepared before detailing begins to ensure smooth workflow. Pre-inspection must be completed, and all personal items removed and secured. Tools for both interior and exterior work should be prepared in advance to avoid delays during execution.

2.2 PHASE 2: WHEELS & TIRES

Wheel and tire cleaning must always be performed first to prevent contamination of cleaned panels later.

Apply wheel cleaner and agitate thoroughly, ensuring all areas including barrel, face, and lug nuts are cleaned. Tires must be scrubbed until all browning is removed. Rinse completely before moving to the next phase.

2.3 PHASE 3: PRE-WASH & FOAM

The vehicle should be rinsed to remove loose dirt, followed by a foam application. Allow foam to dwell for 2–3 minutes to break down contaminants before rinsing off.

This step reduces the risk of scratching during contact wash.

2.4 PHASE 4: CONTACT WASH

A proper contact wash must be performed using a clean wash mitt and the two-bucket method. Always wash from top to bottom to prevent dragging dirt across clean surfaces.

Recommended panel order:

Order	Area
1	Roof
2	Windows
3	Hood
4	Side panels
5	Rear

2.5 PHASE 5: DRYING

Dry the vehicle immediately after washing using microfiber drying towels or a blower. Special attention must be given to mirrors, grills, and emblems where water tends to accumulate.

No water spots should remain after this step.

2.6 PHASE 6: INTERIOR DETAIL

Interior detailing should be completed according to the Interior SOP. When working with two technicians, this phase should run in parallel with exterior work to improve efficiency.

2.7 PHASE 7: DECONTAMINATION (IF INCLUDED)

If included in the service, perform chemical and physical decontamination. Apply iron remover to break down embedded contaminants, followed by clay bar treatment to smooth the paint surface.

2.8 PHASE 8: PAINT ENHANCEMENT (IF INCLUDED)

If paint enhancement is part of the service, perform a light polish to remove minor swirls and improve overall gloss. This step prepares the surface for protection and enhances final appearance.

2.9 PHASE 9: PROTECTION APPLICATION

Apply the selected protection method based on service level.

Protection Type	Description
Wax	Basic protection and gloss
Sealant	Longer-lasting protection
Ceramic Spray	Enhanced durability and hydrophobic effect

Ensure even application and proper curing as per product guidelines.

2.10 PHASE 10: FINAL FINISH

Final detailing ensures presentation quality. Apply tire dressing, restore trim where needed, and clean door jambs and exhaust tips.

The vehicle should appear uniform, clean, and professionally finished.

2.11 PHASE 11: FINAL QC

A complete inspection must be performed before delivery to ensure quality standards are met.

Area	Standard
Exterior	No streaks, no water spots, even finish
Interior	No dust, no odor, clean glass
Overall	Clean, consistent, and customer-ready appearance

3 2-TECHNICIANS WORKFLOW

When two technicians are assigned, tasks should be divided to maximize efficiency.

Technician	Responsibility
Tech 1	Exterior: wheels, wash, drying, protection
Tech 2	Interior: full interior SOP execution

Both technicians should complete their sections at approximately the same time to maintain workflow efficiency.

---

4 COMMON FAILURES

- Skipping proper wheel cleaning at the start
- Incorrect wash order causing recontamination
- Leaving water spots due to slow drying
- Poor coordination between technicians
- Rushing final finishing touches
